

Many companies struggle to keep up with the tedious tasks of gathering energy bills, extracting data, following up with suppliers and analyzing all this information in one place. Even if that data is collected via automated processes, significant staff resources are necessary to coordinate information from your supply chain, meet deadlines and manage the whole process.

ADEC Innovations (ADEC) has over 30 years' experience providing consulting services, creating software solutions and finding business process outsourcing (BPO) and management opportunities that get you out of manual, basic activities like spreadsheets, and into saving resources like fuel, energy and, of course, money.

Harnessing Sustainability Data

Data is the key to connecting profitability and sustainability. It offers the insights necessary to implement the most effective programs and make informed business decisions. With ADEC you will be able to identify, collect, standardize and analyze the right information to ensure you are making the right decisions and achieving the best results.

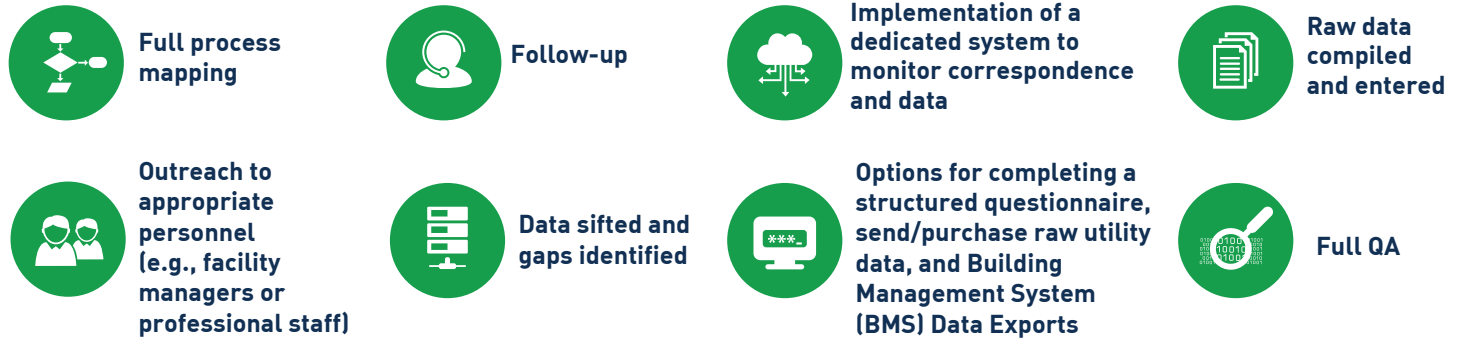

Reallocate your internal resources where they need to focus with ADEC:

- Pursue and standardize data
- Collect or remind personnel in your locations to report data
- Deliver high-speed document scanning and data indexing
- Optimize data entry into your system of choice
- Provide detailed metric reporting
- Facilitate large-scale collaboration
- Design proven software solutions specifically for your needs
- Gain competitive advantage as an organization fully engaged with sustainability initiatives
- Realize enhanced business performance in multi-stakeholder environments

Establishing a standard protocol, whether for waste, water, carbon or greenhouse gas (GHG), is essential to consistent, credible and transparent emissions reporting for your organization, and for standards like CDP. ADEC prepares a work plan that ensures full transparency and successful implementation.

The ADEC process includes:

ADEC will reach out to each facility point of contact requesting all the bills within a specified timeframe and will communicate with you about any gaps in the data. ADEC will prepare a detailed work plan to ensure full transparency and successful implementation.

Only ADEC has the unique capability to use information technology, expert people and process to drive continuous business performance improvement. We can also combine environmental data collection with social factors such as labor relations, worker health and safety, community engagement and supplier relations, **for complete sustainability management and reporting**. Additionally, ADEC will collect the data necessary to calculate your Scope 3 emissions.

Depending on the scope of your project, pricing starts at as little as \$250/facility. And, if you're facing a challenge with foreign language barriers, ADEC can contact Chinese-speaking facility managers in their own language to ensure a complete understanding of the sustainability reporting requirements.

End your Data Chase. Seize your opportunities.

- **Lower** data collection **costs** (as much as 30%)
- **Reduced** data collection **time** (up to 50%)
- **Improved** data **quality**
- **Increased** operational **efficiencies**
- **Engaged** and collaborative **supply chain**
- **Improved** public disclosure **performance**
